### Gartner Says Big Data Disruptions Can Be Tamed With Enterprise Architecture

Analysts to Discuss the Role of Enterprise Architecture in the Age of Big Data at Gartner Enterprise Architecture Summit, May 14-15 2012 in London, UK and May 23-24 in National Harbor, MD

Enterprise architecture (EA) practitioners have a major role in ensuring their organizations maximize the business opportunities posed by big data, according to Gartner, Inc.

Big data makes organizations smarter and more productive by enabling people to harness diverse data types previously unavailable, and to find previously unseen opportunities. However, Gartner analysts said big data poses big challenges as well — and that's where enterprise architects can help. As navigators of strategic change, the task for EA practitioners is to chart the right course for big data across the most critical dimensions of the organization: business, culture, talent and technology.

Last week, CAST attended the [Gartner EA Summit](#), held at National Harbor. It was two days of jam-packed sessions and workshops about Enterprise Architecture, but what stuck out the most was the value of this very unique discipline as a catalyst for Digital Transformation.

EA and [Digital Transformation](#) were the core focus of many presentations, including Mike J. Walker's session "Leverage EA to Understand the Value and Impacts of Digital Disruption." Mike stressed that this ever-evolving discipline is becoming a vital component to corporate strategy, delivering high-performing and sustainable business outcomes.

## Future of EA 2025: Evolving From Enterprise to Ecosystem

**Published:** 7 October 2014

**Analyst(s):** Marcus Bloesch, Betsy Burton

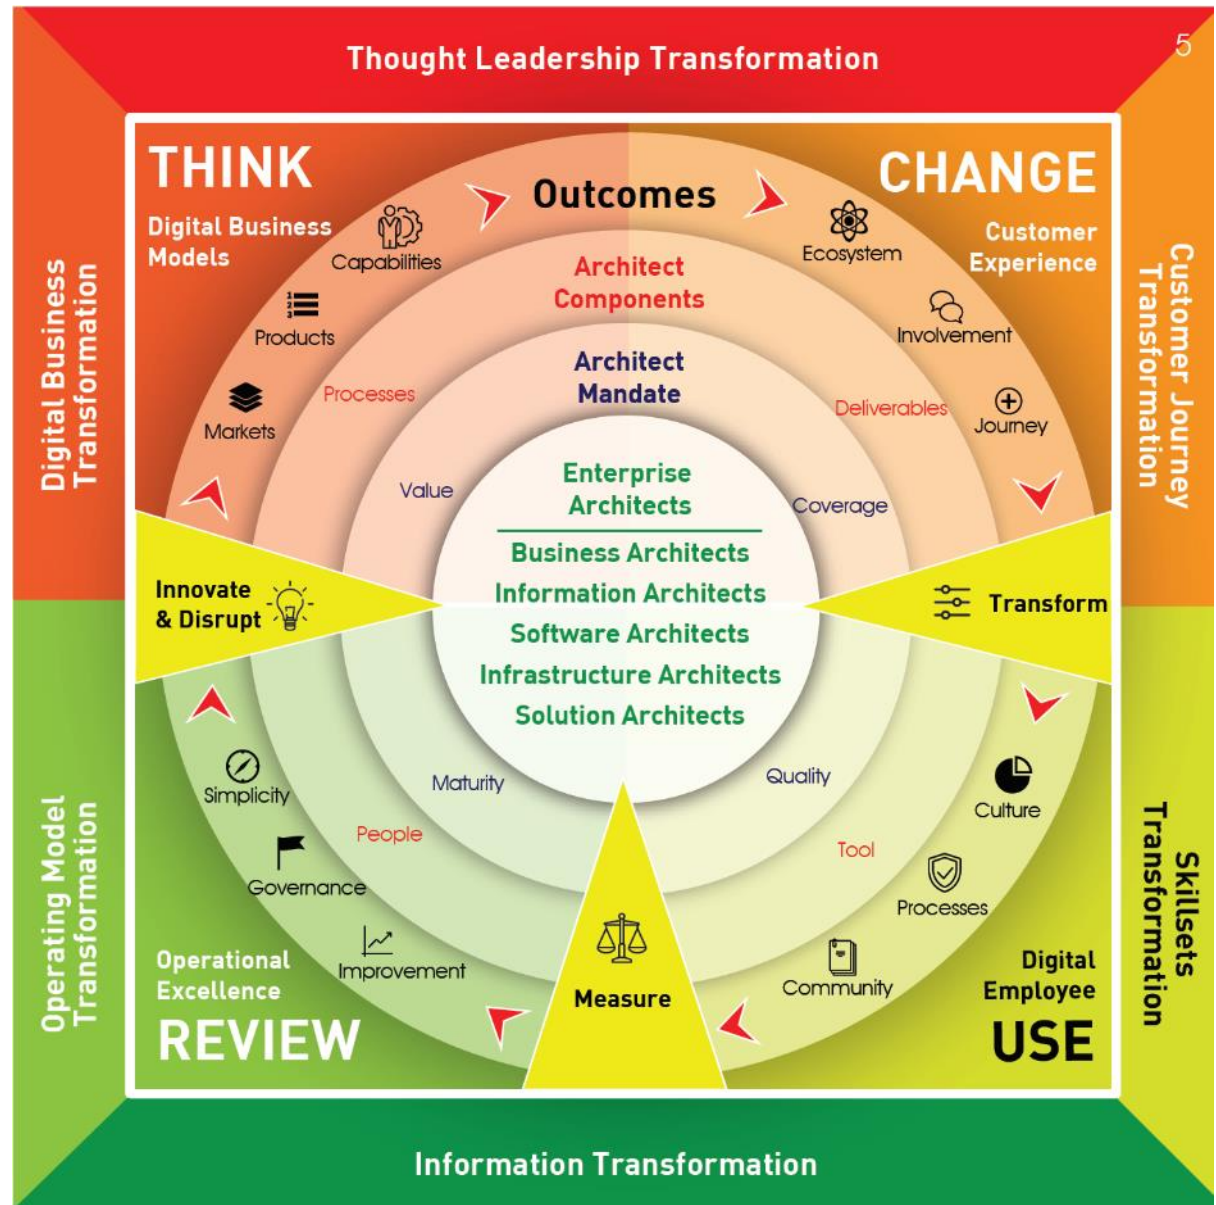

Digital business is altering and broadening industries, businesses and people. EA practitioners will expand their perspectives beyond an "enterprise" to deliver business outcomes and leading response to disruptive trends with the context of a broader ecosystem of customers, partners and competitors.

By 2025, organizations will predominantly focus EA on delivering business outcomes from the perspectives of their business ecosystem.
